Compliance Verification: Pitfalls of Auditing

Oct 28, 2010 • 11:00 a.m. Eastern Time • Course Length - One Hour.

Instructor: Ginger Hansel, Dangelmayer Associates, L.L.C.

Cost:	members	non-members
	\$95.00	\$140.00

Accurate data is the foundation of effective ESD Program Management. Therefore, it's important to have confidence in the measurements. Choosing the correct type of equipment for each measurement is also important and not always obvious.

The class will cover the correct use of static locators, resistance meters, event detectors, and how to use ionizers effectively. We will discuss the various pitfalls of commonly used instruments, and the invalid test results that can result. For instance, static locators can yield totally invalid readings when used incorrectly due to voltage suppression. What you learn will help you avoid frequently encountered auditing problems, and improve your compliance verification program.

Questions can be submitted in advance to be answered as part of the course. Email your questions to info@esda.org, please specify "Online class question-Compliance Verification-Pitfalls of Auditing" in the subject line.

Registration is requested by Oct 7th to guarantee course scheduling Registrations will be accepted until October 27th
